

METASEARCH TEST BOOKING

A rate review for 12/12 revealed that Vio featured the lowest 1-night rate on the hotel's Metasearch listing at \$150 before taxes. Other channels listed higher rates, while the hotel's proprietary booking engine was priced between \$179 and \$209. Additionally, an examination of the PMS integrated booking from the CRS showed an incorrect source designated as Direct, while the market segment was accurately categorized under Wholesale.

- The hotel should ensure the source code is properly mapped in the interface from the Synxis source code WEBBEDS.
- Our official recommendation is to only use Hotel Trader as its exclusive connectivity partner to prevent third-party platforms from devaluing direct pricing. However, since a direct contract exists with this wholesaler, we recommend sending this test booking example to Webbeds and have them perform an investigation into how wholesale inventory is being disseminated across digital channels.
